

EXPEDITED PROCEDURE

Sub D7

1. (Once amended) A method of communicating broadcast

information comprising the steps of:

- B1
- a) causing a server to communicate a first stream representing digital broadcast information to a first user device wherein said server and said first user device are coupled to the Internet;
 - b) causing said server to communicate a second stream representing said broadcast information to a second user device wherein said second user device is coupled to the Internet;
 - c) causing said first user device to communicate a third stream representing said broadcast information to a third user device wherein said third user device is coupled to the Internet; and
 - d) receiving and rendering, concurrently, said broadcast information on said first, second and third user devices.

Sub D2

8. (Once amended) A method of broadcasting information over a

network of electronic devices, said method comprising the steps of:

- B2
- transmitting broadcast information from a server to a first group of electronic devices of said network; and
 - achieving broadcasting of said broadcast information for said first group and a second group of electronic devices by forwarding said broadcast information from said first group of electronic devices to said second group of electronic devices of said network such that said first and second groups of electronic devices receive and render, concurrently, said broadcast information.

EXPEDITED PROCEDURE

OFFICIAL

Sub D3

15. (Once amended)

A method of communicating broadcast

information comprising the steps of:

a) communicating a first digital stream to a first user device, said first digital stream representing broadcast information, said step a) performed by a server and wherein said server and said first user device are coupled to the Internet;

b) communicating a second digital stream to a second user device, said second digital stream representing said broadcast information, said step b) performed by said server and wherein said second user device is coupled to the Internet;

c) communicating a third digital stream to a third user device, said third digital stream representing said broadcast information, said step c) performed by said first user device wherein said third user device is coupled to the Internet; and

d) receiving and rendering, concurrently, said broadcast information on said second and third user devices.

Sub D4

24. (Once amended)

A system for communicating broadcast

information comprising:

a) a server configured to communicate a first digital stream to a first user device, said first digital stream representing broadcast information and wherein said server and said first user device are coupled to the Internet;

b) said server also configured to communicate a second digital stream to a second user device, said second digital stream representing said

broadcast information and wherein said second user device is coupled to the Internet;

c) said first user device configured to communicate a third digital stream to a third user device, said third digital stream representing said broadcast information and wherein said third user device is coupled to the Internet; and

d) said second and said third user devices also for receiving and rendering, concurrently, said broadcast information.

B5

Sub 57

35. (Once amended) A system for communicating broadcast information comprising:

a) a server configured by a transmission scheduler to communicate a first digital stream to a first user device, said first digital stream representing broadcast information and wherein said server and said first user device are coupled to the Internet;

b) said server also configured by said transmission scheduler to communicate a second digital stream to a second user device, said second digital stream representing said broadcast information and wherein said second user device is coupled to the Internet;

c) said first user device configured by said transmission scheduler to communicate a third digital stream to a third user device, said third digital stream representing said broadcast information and wherein said third user device is coupled to the Internet; and

d) wherein said second and said third user devices are also for receiving and rendering, concurrently, said broadcast information; and
